Platform-specific guides Quickstart Developer guide Android developer guide iOS developer guide Android quickstart Android developer guide iOS developer guide Quickstart Developer guide Quickstart Developer guide A Cloud Anchor is a special type of anchor that can be used to persist AR experiences in the real world. With the ARCore Cloud Anchor API, or ARCore Cloud Anchor service, you can create interactive layers of digital information and anchor them to actual locations, designing experiences that can be shared over time by multiple people across many different devices. Cloud Anchors connect real world locations with digital content that anyone can access from compatible mobile devices. Both Android and iOS users can participate in the same experience and return to them again and again, even weeks or months later. Anchors and Cloud Anchors Cloud Anchors are anchors that are hosted on the ARCore Cloud Anchor API. This hosting enables users to share experiences in the same app. The basic guidelines for anchors also apply to Cloud Anchors. Use cases for developing with the ARCore Cloud Anchor API The ARCore Cloud Anchor API can help persist AR experiences in the real world and create shared experiences between users. The following are some ways you can use it in your own projects. Persist AR experiences in the physical environment and another to see the same object at the same place at a later time. For example, use Cloud Anchors to create virtual signs that help users find their way around train stations, leave virtual notes on their kitchen countertops for their friends, or redecorate their bedrooms with virtual posters. Real-time collaborative experiences Cloud Anchors also enable real-time collaboration between users. For example, users can play a virtual game of ping-pong on the coffee table, or paint a virtual mural together with their community. Device compatibility The ARCore Cloud Anchor API works on all ARCore supported devices. How Cloud Anchors work ARCore connects to the ARCore Cloud Anchor API to host and resolve Cloud Anchors, thereby enabling these shared experiences. This requires a working Internet connection. Here's a high-level picture of how hosting and resolving works: The user creates a local anchor in their environment. The anchor is hosted — ARCore uploads that local anchor's data to the ARCore Cloud Anchor API, and the ARCore Cloud Anchor API returns a unique ID for that anchor. The app distributes that unique ID to other users. The anchor is resolved — Users whose devices have the unique ID can recreate the same anchor using the ARCore Cloud Anchor API. Hosting Your browser does not support the video tag. To establish and host an anchor, ARCore uses a 3D feature map of the space surrounding that anchor. To obtain this feature map, the device's rear camera must map the environment in and around the center of interest from different viewing angles and positions before the host call. The ARCore Cloud Anchor API then creates a 3D feature map of the space, and returns a unique Cloud Anchor ID to the device. Resolving Your browser does not support the video tag. When another user in the same environment points their device's camera at the area where the Cloud Anchor was hosted, a resolve request causes the ARCore Cloud Anchor API to periodically compare visual features from the scene against the 3D feature map that was created. ARCore uses these comparisons to pinpoint the user's position, orientation, and pose relative to the Cloud Anchor. API deprecation policy See ARCore Cloud Anchor API deprecation policy for details. Hey Readers,I hope you are doing good ©Why not? you are planning to develop a mobile for your business and looking for best mobile game ideas to gain more and more profitAs you know, 2022 is said to transform the mobile app development industry. Wondering why?Well, the number of smartphone users across the globe has reached over 8.64 billion in 2022. Thousands of applications are rolled out in the market and the number is only going to increase.So, if you are thinking to invest in mobile app development, now is the time.However, coming up with a unique app idea is challenging.Since the number of apps is increasing so is the competition. So, what you can do is learn the recent trends, analyze what innovative you can do with them, and bring it to your customers.Yes, this works!The world of mobile gaming is flourishing with each passing day. According to a report by Statista, there were 209 million mobile gamers (alone in the USA) in 2021. This number has now increased to 213 million and is predicted to rise further in the upcoming years. These numbers are sheer proof why the popularity and demand for mobile games are mounting at an unprecedented rate.What are the Current Trends in the Mobile Game Industry?Mobile eSportsIndie Gaming (Roblox)PC GamingConsoles Battle GamesHyper Casual GamesGames With Multiplayer FeatureBlockchain Based GamesIntegrate With Social Media ChannelsAI/ML based GamesAR-powered mobile gamesTypes of Games Users PlayIf you find this industry lucrative and want to offer the players an engaging and entertaining mobile gaming application, then this article is for you.Here, we have provided a list of more than 50 mobile game ideas you can think of giving a chance.
